

Swimming should be about living life. Not risking it.

The WAVE w10. A portable, simple-to-use wireless tracking system that keeps your family safer around water.

Pools can be a lot of fun. We set out to build a system that helps keep them that way. The w10 determines when any swimmer is at risk from prolonged submersion and immediately alerts caregivers so they can intervene if needed.

The portable system is extremely reliable, simple to use, and works across all aquatic environments, from your backyard pool to the beach, and even on the family boat.

The w10, built on the belief that the most important accessory for any pool is the one that makes it the safest.

How the w10 works.

Using comfortable lightweight wearables, the w10 accurately measures how long each swimmer's face is fully submerged. If any are at risk, it immediately notifies you via its flashing strobe light and speaker.

- Reliable proven technology
- Wireless and portable
- Virtually plug-n-play
- Works in pools, lakes, beaches, rivers, etc.
- Managed by simple user-friendly app (free)
- Monitors up to 10 swimmers
- Rechargeable
- Wall mount included

88 percent of drownings occur under some form of supervision.

— CENTERS FOR DISEASE CONTROL

23 percent of drownings happen during a family gathering.

— STOPDROWNINGNOW.ORG

Wearables approved by 1000s of the toughest testers: Humans.

- So light that they float
- Easy to wear and share
- Works with goggles, swimcaps
- Stays on during typical swim activities
- Auto power, no buttons to fuss with
- Fixed battery lasts 18-36 months
- Storage solutions available
- Safe, easy to clean

For non-swimmers and pets, too.

BuddyTags attach securely to clothing or bathing suites, and even your pet's collar. The w10 will alert if the wearer enters the water without your knowledge.
